The performance data quoted herein represents past performance and does not guarantee future results. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Market volatility can dramatically impact the fund's short-term performance. Current performance and expense ratio may differ from figures shown. For performance data current to the most recent month end, please call First Eagle Funds at 800.334.2143 or visit us at firsteaglefunds.com. The average annual returns are historical and reflect changes in share price, reinvested dividends and are net of expenses. The average annual returns for Class A Shares "with sales charge" reflect the maximum sales charge of 5.00%. The FTSE Gold Mines Index is an unmanaged index composed of approximately 19 mining companies, is available without dividends reinvested, and is not available for purchase. *1993 performance is for the period 08/31/93 to 12/31/93. **Investments are not FDIC insured or bank guaranteed and may lose value.** *There are risks associated with investing in funds that invest in securities of foreign countries, such as erratic market conditions, economic and political instability and fluctuations in currency exchange rates. Funds whose investments are concentrated in a specific industry or sector may be subject to a higher degree of risk than funds whose investments are diversified and may not be suitable for all investors. Investment in gold and gold related investments present certain risks, including political and economic risks affecting the price of gold and other precious metals like changes in U.S. or foreign tax, currency or mining laws, increased environmental costs, international monetary and political policies, economic conditions within an individual country, trade imbalances and trade or currency restrictions between countries. The price of gold, in turn, is likely to affect the market prices of securities of companies mining or processing gold, and accordingly, the value of investments in such securities may also be affected. Gold related investments as a group have not performed as well as the stock market in general during periods when the U.S. dollar is strong, inflation is low and general economic conditions are stable. In addition, returns on gold related investments have traditionally been more volatile than investments in broader equity or debt markets. Investment in gold and gold related investments may be speculative and may be subject to greater price volatility than investments in other assets and types of companies.* First Eagle Funds are offered by FEF Distributors, LLC, 1345 Avenue of the Americas, New York, NY 10105. **Investors should consider investment objectives, risks, charges and expenses carefully, which are detailed in our prospectus and summary prospectus and may be obtained by asking your financial adviser, visiting our website or calling us at 800.334.2143. Please read our prospectus carefully before investing.**
